Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-25, 46-52 and 64-67, drawn to a sample collection device having an expandable collection member and method of use, classified in class 422, subclass 102.
- II. Claims 26-35 and 53-63, drawn to an assay apparatus having a movable sample collection portion and method of use, classified in class 422, subclass 56.
- III. Claims 36-45 and 68-72, drawn to an assay apparatus having a handle, test cassette, a well of test cassette and means to prevent removal of the collector from the well, classified in class 422, subclass 58.

The inventions are distinct, each from the other because of the following reasons:

Inventions II, III and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the retaining portion coupled to the retaining portion is not required. The subcombination has separate utility such as a means and method of collecting a sample that does not require analytical testing.

Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In

Art Unit: 1743

the instant case the different inventions are not disclosed as capable of being used together and have different modes of operation. Specifically, invention II requires means to express the sample by movement from a first to a second position from the collector through a portal into a test cassette. Invention III requires the sample delivered to the test device by engagement, such that removal is prevented, of the collector.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

A telephone call was made to Mr. Reed on 3/14/03 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
